# **TOKEN DISTRIBUTION**

Financing round	Token Price	Amt. of tokens	Raise	% of total supply
Pre-Seed	\$0.01	50,000,000	\$500,000	5%
Seed	\$0.025	80,000,000	\$2,000,000	8%
KOLs round	\$0.05	6,000,000	\$300,000	0.6%
Public	\$0.2	5,000,000	\$1,000,000	0.5%
Total		141,000,000	\$3,800,000	14.1%

Purpose	Amount of tokens	% of total supply	Release on TGE	Cliff	Vesting monthly, %	Vesting, months
Pre-Seed	50,000,000	5%		1 yr 4 mo	1.90%	4 yr 2 mo
Seed	80,000,000	8%		1 yr	3.41%	2 yr 5 mo
KOL's R	6,000,000	0.6%		3 mo	6.25%	1 yr
Public	5,000,000	0.5%			25%	4 mo
Team	100,000,000	10%		2 yr	2%	4 yr 2 mo
Marketing	369,000,000	36.9%		6 mo	2%	4 yr 2 mo
Ecosystem	265,000,000	26.5%		1 yr 6 mo	2%	4 yr 4 mo
Liquidity	65,000,000	6.5%	4%		20%	8 mo
Foundation	60,000,000	6%		2 yr	2%	4 yr 2 mo
Total supply	1,000,000,000	100%				

### INNOVATIVE TOKEN METRICS AND REWARDS

#### Airdrop for Acquisition:

- **Telegram Slots Game Airdrop:** Upon first-time registration and completing initial tasks (e.g., spinning the slots a certain number of times), users receive a small airdrop of \$NEG tokens;
- **Referral Program:** Users who refer new players to the Telegram game receive additional \$NEG tokens. Both the referrer and the referee get rewarded, incentivizing viral growth;
- **Milestone Rewards:** Users receive \$NEG tokens for reaching specific milestones in the game, such as reaching a certain level, completing daily challenges, or winning a specific number of spins.

#### **Play-to-Earn Mechanisms:**

- Daily Challenges and Quests: Complete daily challenges and quests in the Telegram game to earn \$NEG tokens;
- Leaderboard Rewards: Weekly and monthly leaderboard rewards for top players, providing substantial \$NEG token prizes to the most active and successful players.

#### **Staking and Yield Farming:**

- **Staking Rewards:** Users can stake their \$NEG tokens to earn additional tokens. Higher staking amounts and longer staking periods result in higher rewards;
- Yield Farming Partnerships: Partner with DeFi platforms to offer yield farming opportunities where users can provide liquidity and earn rewards in \$NEG tokens.

#### In-Game Purchases and Token Utility:

- Exclusive In-Game Items: Use \$NEG tokens to purchase exclusive in-game items, skins, and features that enhance gameplay;
- Event Participation: Special in-game events and tournaments that require \$NEG tokens to enter, providing substantial rewards for winners.

## **BALANCING SUPPLY AND DEMAND**

#### **Token Burning Mechanisms:**

- **Transaction Fees:** Implement a small fee on every \$NEG transaction within the game and the main platform, with a portion of the fee being burned to reduce the total supply over time;
- **Buyback and Burn:** Allocate a portion of the platform profits to regularly buy back \$NEG tokens from the market and burn them, supporting the token price.

#### **Controlled Token Release:**

- **Gradual Vesting:** Implement a gradual vesting schedule for tokens allocated to team, advisors, and early investors to prevent sudden influxes of tokens into the market;
- **Dynamic Airdrop Release:** Airdropped tokens are released in stages based on user activity and platform milestones, ensuring a steady distribution without flooding the market.

#### Incentivizing Long-Term Holding:

- Loyalty Programs: Introduce loyalty tiers that provide better benefits the longer a player holds their tokens. Benefits include reduced transaction fees, higher staking rewards, and exclusive access to events;
- **Dividend Sharing:** Share a portion of the platform's revenue with \$NEG token holders, incentivizing them to hold their tokens to receive periodic dividends.
